

VARSHARANI MANE

Full-Stack Engineer | React.js | PHP | Laravel | MySQL | REST APIs | Fintech (NBFC/ BFSI)

Mumbai, India | 9359509597 | varshamane2002@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-Stack Engineer with **4+ years** building production-grade financial systems in regulated **NBFC/fintech** environments, including **2+ years specialized in React.js (Hooks, Context API, component-based architecture, state management)** and backend development with **Laravel/PHP**. Delivered React front-end interfaces and **RESTful API** integrations for a **Loan Origination System (LOS)** and **Loan Management System (LMS)**, reducing manual processing effort by **~50%**. Skilled in modern **JavaScript (ES6+)**, Git-based workflows, and **writing clean, scalable, maintainable code** across the stack. Currently leading a cross-functional development team, mentoring engineers, driving React.js architectural decisions, and applying strong analytical, process-driven practices to deliver on time in a regulated domain.

CORE SKILLS

- **React.js:** Context API, Functional Components, State Management, Reusable Components, API Integration, Responsive UI, Component-Driven Development, Performance Optimization.
- **JavaScript (ES6+),** jQuery, AJAX, HTML5, CSS3, Bootstrap, Tailwind CSS, AJAX, jQuery
- **Front-End Build & Version Control:** npm/Webpack tooling, Git & collaborative version control, code review workflows, JSON, Postman, Swagger, Webhooks
- **Back-End (supporting full-stack context):** PHP 8, Laravel 10+, CodeIgniter, MySQL, RESTful API design & integration, MVC Architecture, CRUD, Authentication, Authorization, Validation, Business Logic.
- **Security & Auth:** JWT, SSO, OpenSSL Encryption, RBAC, Data Security, Session Management, API Authentication, Access Control, Rate Limiting
- **Performance & Engineering:** Query Optimization, Server-Side Pagination, Lazy Loading, Caching, Chunk Processing, Background Jobs, API Rate Limiting, Response Optimization, Code Review.
- **Practices:** Agile/Scrum, Iterative Development, Debugging & Performance Optimization, Technical Documentation, Stakeholder Collaboration, Mentoring, Production Issue Debugging & Performance Optimization, Git & Version Control, Technical Documentation
- **API Integrations:** RESTful API, JSON, Postman, Swagger, Webhooks, Stripe, PayPal, Karza, CRIF, Corpository, YouTube Data API
- **Domain:** Fintech, NBFC, Loan Origination Systems (LOS), Loan Management Systems (LMS), Credit Risk, Factoring, Invoice Financing, E-Commerce, CMS

PROFESSIONAL EXPERIENCE

Lead Full-Stack Engineer (React.js & Laravel) | Assistant Manager - SBI Factors Limited

Dec 2025 – Present

Mumbai, India | React.js, Laravel, PHP 8, MySQL, AJAX, Bootstrap

- Designed and **built React.js front-end modules (Hooks, component-based architecture)** for the Loan Origination System (LMS), covering **Financials, Proposal Creation, and Crif API Integration**, reducing manual processing effort by **~50%** and eliminating repetitive data entry.
- Built a **React.js interface for an Early Warning System (EWS)**, presenting automated checks for **Limit exposure, recourse exposure, and risk conditions to improve proactive risk identification**.
- **Improved application performance across data-heavy React.js pages and reports through server-side pagination, lazy loading, optimized state management, and asynchronous data fetching**, resulting in faster load times reduced unnecessary API calls, and a better user experience.
- Lead a cross-functional development team: **sprint planning, code reviews, stakeholder requirement translation, and on-time delivery of front-end and back-end financial modules** acting as expert for React.js architecture decisions.
- Continuously **evaluate and refactor existing front-end components to improve performance, reusability, and maintainability, documenting development processes** for stakeholder alignment.
- Support and mentor junior engineers on React.js best practices, debugging, and code review standards.
- **Optimized Laravel backend processing using indexing, caching, chunking, Service class, single repository and background jobs for faster financial operations.**
- Designed **EOD/EOM financial pipelines** for accurate interest, overdue, exposure, and recovery calculations.

- Improved backend processing efficiency using **Laravel optimization, database indexing, query optimization, caching, processing, and background jobs, reducing processing time for large-volume** financial operations.

Software Engineer — React.js & Laravel — Kritva Technologies

Jun 2024 – Nov 2025

Client: SBI Factors | Mumbai, India | React.js, Laravel, PHP, MySQL, OpenSSL, CRIF API, Karza API, Corpository API

- Built React.js front-end views for the Loan Origination System (LOS), including financial analysis, credit calculations, internal rating, committee approval, and proposal workflow screens** driven by CRISIL-formula-based rating logic.
- Developed reusable React.js components and Laravel REST APIs for financial workflows, improving modularity and reducing duplicated development effort across the LOS platform.**
- Integrated **Karza PAN Verification, CRIF Credit Bureau, and Corpository Corporate Data APIs** into React.js workflows, handling authentication, response validation, error handling, and data normalization for front-end consumption.
- Debugged and optimized React.js views and Laravel/MySQL back-end services (**query optimization, indexing, caching, chunk processing**) to improve performance and scalability for large-volume financial data.
- Implemented **RBAC (role-based access control) in the front-end to restrict sensitive financial operations by user role, alongside OpenSSL-based encryption for PII fields** across the LOS data layer.
- Debugged and resolved production performance issues across React.js views and Laravel/MySQL back-end services (**query optimization, indexing, caching**) to maintain system reliability for large-volume financial data.

Web Developer — React.js & Laravel/CodeIgniter — Noitavonne

May 2022 – May 2024

Kolhapur, India | React.js, Laravel, CodeIgniter, REST APIs, SSO, Stripe, PayPal

- Developed reusable front-end components in **React.js, JavaScript, AJAX, HTML5, CSS3, and Bootstrap** for **single-page applications**, improving UI consistency and development efficiency.
- Designed and consumed **RESTful APIs (Laravel and CodeIgniter) from React.js SPAs**, including **authentication, CRUD operations, form validation**, and third-party integrations.
- Integrated **Stripe and PayPal payment gateways** into codeigniter checkout flows, implementing secure payment workflows and transaction handling.
- Implemented **Single Sign-On (SSO) authentication across multi-product React.js applications**, streamlining authentication and improving cross-platform user experience.
- Delivered multiple CMS and e-commerce applications end-to-end front-end integration, backend development, **REST APIs**, testing, and deployment.
- Improved **front-end performance through code optimization and SEO enhancements, reducing page-load times by ~20–30%** across client applications.

KEY PROJECTS

- SiloCloud / Silo ERP / Silo OpenWorld / Silo Calendar (React.js, Laravel, CodeIgniter, SSO)** — Built React.js front-ends consuming RESTful Laravel APIs across the Silo product suite, covering CRUD workflows, dashboards, and scheduling modules; secured with JWT and SSO.
- YouTube Clone (React.js, Tailwind CSS, YouTube Data API)** — Responsive video platform with search, playback, and API-driven content.
- Thar Trek (React.js, Tailwind CSS)** — Developed an interactive, visually polished user interface.
- RAG Chatbot — AI Document Q&A Assistant (Python, Streamlit, Groq API, ChromaDB)** — Built a document-grounded Q&A assistant with ingestion, chunking, and embedding-based retrieval, separating UI and logic layers.
- LOS — Loan Origination System (React.js, Laravel, MySQL, RBAC, OpenSSL, CRISIL Ratings)** — Built React.js front-end screens for loan approval and KYC verification workflows with RBAC-based access and OpenSSL-encrypted PII fields.
- LMS – Loan Management System (Laravel, MySQL, JavaScript, Early Warning System)** – Developed EWS to flag overdue invoices and recourse risks, with automated limit exposure controls for client, debtor, and supplier.

EDUCATION

- | | | |
|--|---|------|
| Bachelor of Technology (B.Tech), Electronics & Telecommunication - | DBATU University | 2026 |
| Diploma in Computer Science — | Nanasaheb Mahadik Polytechnic Institute | 2021 |

CERTIFICATIONS & ACHIEVEMENTS

- React: Scratch to Advanced — Mind Luster Platform, 2024**
- Spot Award — SBI Factors Limited (Client Recognition) for delivering critical LOS functionalities** while working with Kritva Technologies Pvt. Ltd.
