

VARSHARANI MANE

Full-Stack Engineer (PHP / Laravel / React.js) — Fintech & NBFC Systems

Mumbai, India | 9359509597 | varshamane2002@gmail.com | [Portfolio](#) | [GitHub](#) | [Linkedin](#)

PROFESSIONAL SUMMARY

Full-Stack Engineer with 4 years of experience building production-grade financial systems, including 2+ years developing React.js front-ends (hooks, component-based architecture, responsive design) alongside Laravel/PHP back-end development. Delivered a Loan Origination System (LOS) and Loan Management System (LMS) for SBI Factors Limited, **automating core invoice workflows and cutting manual processing effort by ~50%**, while integrating REST APIs with regulated third-party services (CRIF, Karza, Corpository). Currently leading a cross-functional development team, mentoring junior engineers, and collaborating directly with banking stakeholders on system logic and EOD/EOM financial calculations.

CORE SKILLS

- **Front-End:** React.js (Hooks, Context, component-based architecture), JavaScript (ES6+), Responsive Design, Bootstrap, Tailwind CSS, jQuery
- **Back-End:** PHP 8, Laravel 10+, CodeIgniter, MySQL, RESTful API Design & Integration
- **Security & Auth:** JWT, SSO, OpenSSL Encryption, RBAC (Role-Based Access Control), Data Security, Session Management, Data Encryption
- **Practices & Tools:** Agile / Scrum, Git & Collaborative Version Control, Code Review, Performance Optimization, Technical Documentation
- **API Integrations:** Karza (PAN Verification), CRIF (Credit Bureau), Corpository (Corporate Data), Stripe, PayPal, YouTube Data API, RESTful API, JSON, Postman, Swagger, Webhooks
- **Domain Expertise:** Fintech / NBFC, Loan Origination Systems (LOS), Loan Management Systems (LMS), Credit Risk Systems, Factoring Platforms, E-Commerce / CMS

PROFESSIONAL EXPERIENCE

Lead Full-Stack Engineer — SBI Factors Limited

Dec 2025 – Present

Mumbai, India | Laravel, PHP 8, MySQL, React.js, AJAX, Bootstrap

- Architected and shipped the Loan Management System (LMS) covering invoice booking, limit exposure management, and disbursement workflows **and automated posting to client/debtor accounts, reducing manual processing effort by ~50% and eliminating repetitive data entry.**
- Developed an **Early Warning System (EWS)** for invoice monitoring, implementing automated checks for overdue invoices, recourse exposure, and risk conditions **to improve proactive risk identification.**
- Improved backend processing efficiency using **Laravel optimization, database indexing, query optimization, caching, chunk processing, and background jobs**, reducing processing time for large-volume financial operations.
- Improved application performance across **data-heavy pages and reports** by implementing **server-side pagination, optimized queries, lazy loading, caching, and asynchronous processing**, resulting in faster page load times and improved user experience.
- Leading a cross-functional development team: **sprint planning, code reviews, stakeholder requirement translation, and on-time delivery of financial modules.**
- **Designed EOD/EOM financial calculation pipelines ensuring data accuracy for factoring operations**, with zero tolerance for calculation drift in a regulated environment.
- Collaborated directly with business and operations stakeholders to translate **NBFC factoring requirements and financial business rules** into scalable software solutions.

Software Engineer — Kritva Technologies (Client: SBI Factors)

Jun 2024–Nov 2025

Mumbai, India | Laravel, PHP, MySQL, OpenSSL, CRIF API, Karza API, Corpository API, React.js

- Developed **Loan Origination System (LOS)** modules for factoring operations, including financial analysis, credit calculations, internal rating, committee approval, and proposal workflows.
- **Built CRISIL-formula-based financial rating modules for the LOS**, translating complex credit-risk logic into validated, auditable back-end calculations consumed by React.js front-end views.

- Integrated **Karza PAN Verification, CRIF Credit Bureau, and Corpository Corporate Data APIs**, implementing authentication, API response validation, error handling, data normalization, and integration workflows.
- Optimized **Laravel and MySQL applications** through query optimization, database indexing, eager loading, caching, chunk processing, pagination, bulk operations, and background jobs, improving application performance and reducing processing time for large-volume financial data.
- Optimized **API performance and scalability** by implementing **API rate limiting, request validation, response optimization, database query tuning, and efficient data retrieval**, improving system stability under concurrent user loads.
- **Implemented OpenSSL-based encryption for all PI fields**, enforcing data-security requirements across the LOS data layer and **RBAC (role-based access control)** to restrict sensitive financial operations by user role and permission scope.
- Developed reusable **Laravel REST APIs and React.js components** for financial workflows, improving modularity and reducing duplicated development effort.

Web Developer — Noitavonne

May 2022 – May 2024

Kolhapur, India | Laravel, CodeIgniter, React.js, REST APIs, SSO, Stripe, PayPal

- Designed and developed **RESTful APIs** using Laravel and CodeIgniter for React.js single-page applications, including authentication, CRUD operations, validation, and third-party integrations.
- Developed and integrated **Stripe and PayPal payment gateways**, implementing secure payment workflows, transaction handling, and API-based payment processing.
- Implemented **Single Sign-On (SSO)** authentication for multi-product enterprise applications, streamlining authentication and improving cross-platform user experience.
- Delivered multiple **CMS and e-commerce applications end-to-end**, covering database design, backend development, REST APIs, frontend integration, testing, and deployment.
- Optimized application performance through **database query optimization, API improvements, frontend optimization, and SEO enhancements**, reducing page-load times by **~20–30%** across client applications.
- Developed reusable frontend components using **React.js, JavaScript, AJAX, HTML5, CSS3, and Bootstrap**, improving UI consistency and development efficiency.

KEY PROJECTS

LOS — Loan Origination System (Laravel, MySQL, RBAC, OpenSSL, CRISIL Ratings, React.js)

- Streamlined loan approval and KYC verification workflows, replacing manual processes.
- Implemented RBAC with granular permission scopes; OpenSSL encryption on all PII data fields.

LMS — Loan Management System (Laravel, MySQL, JavaScript, Early Warning System)

- Built an Early Warning System (EWS) to proactively flag overdue invoices and recourse risk.
- Designed Limit Exposure logic enforcing credit utilization ceilings per client, debtor, and supplier.

SiloCloud / Silo ERP / Silo OpenWorld (Laravel, CodeIgniter, React.js, SSO)

- Delivered CMS, ERP, and e-commerce modules; integrated SSO authentication across the product suite.

YouTube Clone (React.js, Tailwind, YouTube Data API) — [URL](#)

- Responsive video platform with search, playback, and API-driven content.

Thar Trek (React.js, Tailwind) — [URL](#)

- Developed an interactive and visually appealing user interface for the Thar Trek project.

EDUCATION

Bachelor of Technology (B.Tech), Electronics & Telecommunication — DBATU University	2026
Diploma in Computer Science — Nanasaheb Mahadik Polytechnic	2021

CERTIFICATIONS & ACHIEVEMENTS

- React: Scratch to Advanced — Mind Luster Platform, 2024
- Spot Award — Loan Origination System (LOS) delivery recognized by SBI client
